

State Revolving Fund Loan Programs Drinking Water, Wastewater, Nonpoint Source

PRELIMINARY DECISION OF CATEGORICAL EXCLUSION

TO ALL INTERESTED CITIZENS, ORGANIZATIONS AND GOVERNMENT AGENCIES:

CITY OF EVANSVILLE
Wimberg Lift Station Improvements
Preliminary Engineering Report D Addendum #2: Project #14
SRF # WW 08 13 82 05

Date: December 6, 2012

Pursuant to IC 4-4-11, the State Revolving Fund (SRF) Loan Program has determined that the project described here and in the city's Preliminary Engineering Report Addendum #2 received by the SRF on October 9, 2012 will have no substantial negative environmental impact. Therefore, the SRF is issuing a preliminary decision of Categorical Exclusion from the requirements of substantive environmental review.

How were environmental issues considered?

The National Environmental Policy Act requires agencies disbursing Federal funds to include environmental factors in the decision making process. A summary of the project is attached for your review. The SRF's preliminary review has found that the proposed project does not require the preparation of either an Environmental Assessment or an Environmental Impact Statement.

Why is additional environmental review not required?

Our environmental review has concluded that significant environmental impacts will not result from the proposed action.

How do I submit comments?

Comments can be submitted to:

Max Henschen, Senior Environmental Manager
SRF Programs

CATEGORICAL EXCLUSION

I. PROJECT IDENTIFICATION

Project Name and Address: **Wimberg Lift Station Improvements
Preliminary Engineering Report D
Addendum #2: Project #14**
City of Evansville
1 NW Martin Luther King Jr. Blvd., Room 104
Evansville, IN 47740-0001

SRF Project Number: WW 08 13 82 05

Authorized Representative: Mr. Allen Mounts, Director
Evansville Water and Sewer Utility

II. PROJECT LOCATION

Evansville is located in southeastern Vanderburgh County. The Wimberg lift station project area is located in the Evansville North, IND. USGS 7.5 topographic quadrangle in Center Township, T6S, R11W, and northwest ¼ of section 1 (see Exhibit 14-2).

III. PROJECT NEED AND PURPOSE

This type of lift station is becoming obsolete because of changing regulations for confined space entry into the pump pit. Other problems associated with this lift station include: inadequate hydraulic capacity based on the peak design flow; decommissioned man lift; no onsite safety equipment; no wet well vent; exposed electrical wires within the dry pump pit; deteriorating dry pit walls and floor; reaching the end of its useful service life, and the potential for sanitary sewer overflows (SSOs) exists during electrical or mechanical failures. The lift station needs to be upgraded and expanded to address these problems.

The proposed project includes: converting the lift station from a dry pit/wet well configuration to a submersible lift station with two constant speed pumps rated at 450 gpm each; rehabilitating the existing wet well by using multi-layered polymer resin, while replacing the top slab with a new one having an appropriately sized hatch; removing the existing dry well from the surface to approximately one foot below the bottom of the proposed valve pit, while filling the remaining portion of the dry well with concrete; constructing a new valve pit on the existing site and connecting the new force main to the existing force main; and replacing the control panel with one that can interact with system communications (see Exhibit 14-12).

Two alternatives were evaluated for the lift station improvements project including the "No Action" alternative.

The “No Action” alternative was rejected since the existing lift station would continue to deteriorate resulting in increased maintenance and eventually failing causing the potential for SSOs to occur.

Existing Lift Station Upgrade – This alternative proposes upgrades and modernization of the existing lift station to bring it up to current standards. This is the selected alternative.

IV. ESTIMATED PROJECT COSTS, AFFORDABILITY AND FUNDING

A. Selected Plan Cost Summary

<u>Construction Components</u>	<u>Costs</u>
Mobilization/Demobilization/Bonds/Insurance	\$ 9,500
Complete Bypass Pumping	15,000
Demolition of Dry Well	4,250
Rehabilitating Wet Well	20,684
Wet Well Pumps, Rail, Brackets, & Piping	30,600
Pump Control Panels and Floats	17,100
Relocate, Reinstall Radio Equipment	4,000
Valve Pit & Appurtenances	40,000
Approximately 35 feet of 8-inch Force Main	2,625
Site Restoration	10,025
Subtotal Estimated Construction Costs	\$153,784
Contingencies	15,378
Total Estimated Construction Costs	\$169,162
 Non- Construction Costs	
Administrative and Legal	\$ 2,500
Engineering Design Fees	21,750
Planning Fees	11,112
Project Inspection	22,000
Total Non-Construction Costs	\$ 57,362
Total Estimated Project Costs	\$226,524

- B. The city has sufficient funds remaining from the 20-year loan of \$31,750,000 which the city closed with the SRF on October 19, 2009, to fund this project.

V. ENVIRONMENTAL IMPACTS OF THE FEASIBLE ALTERNATIVES

The project will occur in a previously disturbed area and will not affect endangered species or their habitat, streams, wetlands, or the 100-year floodplain.

Construction and operation of the project will not alter, demolish or remove historic properties (see Exhibit 14-9). If any visual or audible impacts to historic properties occur, they will be temporary and will not alter the characteristics that qualify such properties for inclusion in or

eligibility for the National Register of Historic Places. The SRF's finding pursuant to Section 106 of the Historic Preservation Act is: "no historic properties affected"

VI. PUBLIC PARTICIPATION

A properly noticed public hearing was held at the Central Library, Browning Event Room A – Central on September 28, 2012, at 3:00 p.m. to discuss the addendum to the Preliminary Engineering Report. No one from the public attended the hearing, and no written comments were received.
